# JavaScript Full Stack Developer

**Mid to Senior Level; full-time, contract-to-hire or Contract**

## Position Description

Dev IQ is looking for a highly motivated and experienced JavaScript Full Stack Developer to join our growing team. You will be responsible for building scalable Enterprise Web Applications & Services for multiple platforms, including Cloud-based SaaS/PaaS Product Engineering and Cloud-Native Application Development.

Your primary focus will be to implement end-to-end user experiences for mobile and desktop web apps, with a focus on performance and reusable, testable code. You will also be responsible developing back-end interfaces (API's, Database Design, Machine Learning integrations). Your main duties will include working with our preferred stack of Javascript and NodeJS. You will collaborate with our UX/UI Designers and Sr. Architects on design, yet take the lead on implementation, and detailed design elements, including animations, CSS, and final HTML output. A thorough understanding of all of the components of our platform and infrastructure is required.

Dev IQ is an Enterprise Cloud Software Development company specializing in cloud application strategy and design, SaaS/PaaS product engineering, enterprise cloud-native applications, and replatforming. We are Design Thinking advocates and scaled agile experts. We build intuitive and empathic user experiences (UX) that leverage multimodal technologies including IoT, mobile, web, ambient/voice, and deep learning/AI solutions. We partner with our clients to build and implement innovative, cost-effective enterprise solutions that enable them to perform better, get to market faster, create stronger relationships with their customers, and differentiate for success.

## Essential Qualities for This Position

- Entrepreneurial spirit and a can-do attitude; Thrives in a startup environment
- Passion for developing great client and end-user experiences
- Strong attention to detail

## Requirements

- 4+ experience developing with JavaScript and related technologies
- Writing tested, idiomatic, and documented JavaScript, HTML and CSS
- Javascript framework experience: React.js, Vue.js or Angular.js

- Experience with responsive CSS framework like Semantic or Bootstrap
- Linux, Microservices or Docker deployment experience
- Experience building out Microservices or RESTful APIs with Node.js
- SQL Database experience with MySQL, Postgres, or other SQL DB
- Developing within AWS, Azure, Google Cloud, or other Cloud Based Environments
- Excellent communication and listening skills
- Successfully works with other team members and also individually
- Ability and willingness to work in an Agile development environment

The following are a plus:

- Bachelor's degree in Computer Science
- Prior experience in software consulting and agile software development processes
- NOSQL experience (MongoDB, DynamoDB, BigTable)
- Self-motivated and enthusiastic about reaching your targets in both life and work
- Passionate about making a difference and improving the Quality of Life
- Writing in ES6 or CoffeeScript
- Server-side tools, including Restify or Express
- AWS/Azure/GCP deployment skills
- Experience and passion for Continuous Improvement and CI/CD/DevOps
- Mocha, or equivalent Test-Driven-Development tools
- Have made Open Source contributions
